FOR ADULTS WITH **MODERATE TO SEVERE PLAQUE PSORIASIS** AND FOR ADULTS WITH **ACTIVE PSORIATIC ARTHRITIS**

SKYRIZI USES

SKYRIZI is a prescription medicine used to treat adults:

- with moderate to severe plaque psoriasis who may benefit from taking injections or pills (systemic therapy) or treatment using ultraviolet or UV light (phototherapy).
- with active psoriatic arthritis (PsA).

SAFETY CONSIDERATIONS

SKYRIZI may cause serious side effects, including:

- Serious allergic reactions: Stop using SKYRIZI and get emergency medical help right away if you get any symptoms of a serious allergic reaction.
- Infections: SKYRIZI may increase your risk of infections. Before starting treatment, your doctor should check you for infections and tuberculosis. Tell your doctor right away if you have an infection or symptoms of one.

Do not use SKYRIZI if you are allergic to risankizumab-rzaa or any of the ingredients in SKYRIZI. Also, tell your doctor if you plan to or recently received a vaccine.

DID YOU KNOW?

PSORIASIS AND PSORIATIC ARTHRITIS ARE RELATED

Ps may appear as red, itchy plaques on the skin, and PsA may present as pain, stiffness, and swelling in the joints.

A majority of people with PsA develop skin symptoms **before joint symptoms.**

However, in some patients with PsA, joint pain can begin before skin plaques appear.

In other cases, patients can have PsA even if they don't have skin symptoms.

PLAQUES ARE A SYMPTOM OF AN IMBALANCE INSIDE YOUR BODY

Although the exact cause of plaque psoriasis is unknown, your body may produce too much of a protein called IL-23 (IL=interleukin).

IL-23 is one of several proteins that may contribute to excess inflammation inside the body, which can lead to painful, red, itchy plaques on the skin.

This is where SKYRIZI comes in. SKYRIZI is a type of immune protein similar to other proteins produced by your own body. It works by binding to the excess IL-23. This can help reduce the overproduction of IL-23 in your immune system—reducing inflammation that can lead to skin plaques as well as joint symptoms.

SAFETY CONSIDERATIONS

SKYRIZI may cause serious side effects, including:

- Serious allergic reactions: Stop using SKYRIZI and get emergency medical help right away if you get any symptoms of a serious allergic reaction.
- Infections: SKYRIZI may increase your risk of infections. Before starting treatment, your doctor should check you for infections and tuberculosis. Tell your doctor right away if you have an infection or symptoms of one.

Do not use SKYRIZI if you are allergic to risankizumab-rzaa or any of the ingredients in SKYRIZI. Also, tell your doctor if you plan to or recently received a vaccine.

WHAT IS PSORIATIC ARTHRITIS AND HOW DO YOU RECOGNIZE IT?

The excess inflammation that may cause plaque psoriasis symptoms can cause joint pain, stiffness, and swelling. This could be **psoriatic arthritis** (PsA). However, the exact cause of PsA is not fully understood.

1 out of 3 people with psoriasis may also develop psoriatic arthritis.

Joint pain, stiffness, and swelling are common signs and symptoms of psoriatic arthritis.

While joint and skin severity may be different from one person to the next, skin severity is not directly related to joint severity.

Talk to your doctor if you recognize any of these joint symptoms.

IMPORTANT SAFETY INFORMATION

What is the most important information I should know about SKYRIZI® (risankizumab-rzaa)?

SKYRIZI is a prescription medicine that may cause serious side effects, including:

Serious allergic reactions:

- Stop using SKYRIZI and get emergency medical help right away if you get any of the following symptoms of a serious allergic reaction:
- fainting, dizziness, feeling
- trouble breathing or throat tightness
- lightheaded (low blood pressure)
- -chest tightness - skin rash, hives
- swelling of your face, eyelids, lips, mouth, tongue, or throat

Infections: SKYRIZI may lower the ability of your immune system to fight infections and may increase your risk of infections. Your healthcare provider should check you for infections and tuberculosis (TB) before starting treatment with SKYRIZI and may treat you for TB before you begin treatment with SKYRIZI if you have a history of TB or have active TB. Your healthcare provider should watch you closely for signs and symptoms of TB during and after treatment with SKYRIZI.

- Tell your healthcare provider right away if you have an infection or have symptoms of an infection, including:
- fever, sweats, or chills
- shortness of breath
- blood in your mucus (phlegm)
- muscle aches

- warm, red, or painful skin or sores on your body different from your psoriasis
- -weight loss
- diarrhea or stomach pain
- burning when you urinate or urinating more often than normal

Do not use SKYRIZI if you are allergic to risankizumab-rzaa or any of the ingredients in SKYRIZI. See the Medication Guide or Consumer Brief Summary for a complete list of ingredients.

Before using SKYRIZI, tell your healthcare provider about all of your medical conditions, including if you:

- have any of the conditions or symptoms listed in the section "What is the most important information I should know about SKYRIZ!?"
- have an infection that does not go away or that keeps coming back.
- have TB or have been in close contact with someone with TB.
- have recently received or are scheduled to receive an immunization (vaccine). Medications that interact with the immune system may increase your risk of getting an infection after receiving live vaccines. You should avoid receiving live vaccines right before, during, or right after treatment with SKYRIZI. Tell your healthcare provider that you are taking SKYRIZI before receiving a vaccine.
- are pregnant or plan to become pregnant. It is not known if SKYRIZI can harm your unborn baby.
- are breastfeeding or plan to breastfeed. It is not known if SKYRIZI passes into your breast milk.
- become pregnant while taking SKYRIZI. You are encouraged to enroll in the Pregnancy Registry, which is used to collect information about the health of you and your baby. Talk to your healthcare provider or call 1-877-302-2161 to enroll in this registry

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

What are the possible side effects of SKYRIZI?

SKYRIZI may cause serious side effects. See "What is the most important information I should know about SKYRIZI?"

The most common side effects of SKYRIZI in people treated for plaque psoriasis and psoriatic arthritis include: upper respiratory infections, headache, feeling tired, injection site reactions, and fungal skin infections.

These are not all the possible side effects of SKYRIZI. Call your doctor for medical advice about side effects.

Use SKYRIZI exactly as your healthcare provider tells you to use it. SKYRIZI is available in a 150 mg/mL prefilled syringe and pen.

LASTING SKIN CLEARANCE

In clinical trials for moderate to severe plaque psoriasis, 3 out of 4 people achieved 90% clearer skin at 4 months and nearly 9 out of 10 sustained it through 1 year.

PROVEN JOINT SYMPTOM RELIEF

In clinical trials for active psoriatic arthritis, a majority of people felt significant relief of joint pain, stiffness, and swelling at 24 weeks.
